
DESIGNING FOR CORROSION CONTROL

TABLE OF CONTENTS

Chapter 1: CORROSION CONTROL AND THE DESIGN PROCESS

Significance of Corrosion	1
Costs of Corrosion	2
Maintenance/Repair/Replacement/Inspection	2
Lost Production/Downtime	3
Warranty Claims	4
Fuel and Energy	4
Loss of Product	4
Environmental Cleanup-Fines	4
Capital Investment	5
Loss of Efficiency — Oversizing and Excess Energy Costs	5
Function	5
Product Contamination	5
Downtime	6
Loss of Redundancy	6
Consumer Confidence	6
Appearance	6
Safety	7
Direct Impacts on Safety	7
Indirect Safety Aspects	10
Preventive vs. Corrective Control	11
Advantages of Preventive Control	12
Preventive Actions Can be Integrated into Design	12
Many Alternatives Can be Considered	13
Costs Can be Predicted and Balanced	13
Safety Can be Assessed	14
Advantages of Corrective Control	14
Integration of Corrosion Control into the Design Process	15
Roles of Participants in Design Process	16
Project Manager/Development Engineer	16
Accountant	16
Planners and Estimators	17
Designers and Design Engineers	17
Draftsmen	17
Production Control	18
Corrosion Engineer	18
Construction Personnel	19

Research and Testing Laboratories	19
Industry	19
Professional Societies	19
Inclusion of Corrosion Engineer in Design Team	20
Stages Where Interaction is Required	20
Activities of Corrosion Engineer	20
Typical Design Process	20
Education of Design Team	22
Post-Design Corrosion Review	23
Methods of Design Analysis	23
Identify Likely Corrosion Sites	23
Identify Critical Areas	23
Design Review Check-off List	24
Innovative Versus Iterative Design	28
Application of Previous Experience	28
Application of “Good” Experience	29
Success Analysis	29
Materials and Design	29
Service Conditions	29
Documentation	30
Application of “Bad” Experience	30
Failure Analysis	30
Visual Observation	30
Preservation of Surfaces	31
Corrosion Products	31
Microscopic Analysis	31
Material Composition	31
Environment Analysis	31
Cause versus Mechanism	31
Design	32
Material Deficiencies	32
Fabrication	33
Environment and Documentation	34
Corrosion Control in “New” Situations	35
Performance Predictions	35
Corrosion Theory	35
Corrosion Testing	35
Configuration Management	36
Component Interaction	36
Importance of Overall Configuration	36
Importance of Operating/Environmental Factors	36
Methods for Configuration Management	37

Chapter 2: MATCHING MATERIALS PERFORMANCE TO SERVICE ENVIRONMENTS

Steps in Materials Selection.	1
Define Service Environment.	1
Define Required Performance	1
Project Material Performance	2
Match Materials	2
Corrosion-Related Environmental Characteristics	2
Chemical Characteristics	2
Water Solutions	3
pH.	3
Major Species.	4
Minor Species	4
Dissolved Gases	5
Nature of Environment	5
Atmospheric	5
Immersion	6
Combinations	6
Temperature	7
Operating Temperature	7
Maximum/Minimum Temperature	7
Heat Transfer	8
Velocity Effects	8
Erosion	8
Removal of Protective Films	8
Cavitation.	9
Pressure.	9
Hydraulic Pressure	10
Overpressure	10
Variations in Pressure	10
Effects of Time	11
Corrosion Rates Versus Time	11
Opportunity to Take Corrective Action Before Failure	12
Opportunity for Maintenance and Repair	13
Additive Versus Interactive Effects	13
Definition of Performance Requirements	14
Optimum versus Acceptable Performance	14
Acceptable versus Unacceptable Corrosion	15
Type of Corrosion	15
Corrosion Rates	16
Projection of Materials Performance	17
Based Upon Previous Service Experience	17
Based Upon Similar Applications	18

Evaluation of Environment	18
Evaluation of Performance	18
Based Upon Materials Performance Data	18
Performance Characteristics	19
Data Sources	19
NACE International Corrosion Data Survey	19
Other	21
Selection Based upon Corrosion Tests	21
Natural Environment Tests	22
Accelerated Tests	24
Electrochemical Tests	26
Materials Selection Process	26
Matching Performance with Requirements	27
Iterative Selection Methodologies	28
Practical Factors Influencing Materials Selection	28
Availability	29
Fabrication	29
Shop Limitations	30
Field Fabrication	30
Quantity	31
Joining	31
Compatibility	31
Welding	32
Crevices	32
Fasteners	32
New Construction	32
Modification	33
Repair	33
Typical Properties of Materials	33
Metals	34
Material Specification	34
Irons and Steels	34
Cast Irons	35
Steels	35
Carbon Steels	36
Low-alloy Steels	36
Alloy Steels	36
Aluminum Alloys	36
Stainless Steels	38
Ferritic	38
Martensitic	38
Austenitic	38
Precipitation Hardening	40

Duplex	40
High Performance	40
Copper Alloys	41
Nickel Alloys	41
Titanium	42
Other Alloys	42
Organic Materials	43
Polymeric Materials	43
Elastomeric Materials	45
Natural Rubber	45
Synthetic Rubbers	46
Other Elastomers	46
Inorganic Non-metallic Materials	46
Cementitious Materials	46
Ceramics	46
Glasses	47
Composite Materials	47
Metallic Matrix	47

Chapter 3: INTERACTIVE EFFECTS OF CORROSION AND DESIGN

Effects of Design Factors on Corrosion	1
Effects of Geometry	2
Time of Wetness	2
Effect on Environment	2
Drainage and Low Points	2
Crevices	5
Inspectability	7
Compatibility	7
Galvanic Corrosion	7
Galvanic Series	9
Mechanics	15
Stress	15
Environmental Cracking	15
Corrosion Fatigue	18
Stress Distribution	19
Vibration	20
Fabrication	20
Fasteners (Riveting and Bolting)	22
Stress Relief	22
Surface	23
Exposed Area	23

Simple Shapes	25
Smooth Surfaces	27
Edges and Corners	30
Design Features for Specific Systems	30
Structures	31
Machinery and Equipment	31
Piping Systems	32
Tanks and Vessels	39
Electrical and Electronic Equipment	45
Ships and Vehicles	47
Crevices	47
Corrosion Control	55
Protective Coatings	55
Designing for Coating	56
Barrier Function	56
Selection of Coatings	56
Types of Coatings	57
Surface Preparation	59
Coating Application	59
Coating Inspection	59
Cathodic Protection	60
Structural Requirements	60
Benefit of Combined Use of Cathodic Protection and Coatings	60
Impressed Current Cathodic Protection Systems	60
Galvanic Anode Cathodic Protection Systems	62
Design of Impressed Current Cathodic Protection Systems	64
Current Requirement	64
Environment	64
Isolation Requirements	65
Groundbed/Anode Location and Layout	65
Anode Selection	65
Power Supply Selection and Sizing	66
Operation and Maintenance	66
Design of Galvanic Anode Cathodic Protection Systems	66
Current Requirement	67
Environment	67
Isolation Requirements	67
Anode Location and layout	67
Anode Selection	67
Operation and Maintenance	68
Change of Environment	68
Service versus Shutdown	68
Atmospheric Control	69

Process Chemical Control	72
Temperature Control	72
Inhibitors	73
Corrosion Allowance	73
Uniform Corrosion	73
Localized Corrosion	74
Maintainability	74
Ease of Maintenance	74
Inspection Requirements	74
Cleaning	74
Access	75
Maintenance Procedures/Guidelines	77
Effects of Corrosion on Function	79
Uniform Corrosion	79
Localized Corrosion	80
Environmental Cracking	82
Contamination by Corrosion Products	83
Abrasion	83
Product Contamination	83
Environmental Contamination	84
Protection of Specific Systems	84
Structures	84
Machinery and Equipment	84
Piping Systems	85
Tanks and Vessels	85
Electrical and Electronic Equipment	85
Ships and Vehicles	85

Chapter 4: OPTIMIZATION OF DESIGN

Economics	1
Direct Costs	2
Indirect costs	2
Methods of Analysis	3
Cash Basis Method	4
Life-cycle Cost Method	4
Payout Period Method	4
Return on Investment Method	4
Annual Cost Comparison	4
Discounted Cash Flow	5
Economic Considerations for Specific Systems	15
Structures	15
Machinery and Equipment	16

Piping Systems	17
Tanks and Vessels	18
Electrical and Electronic Equipment	18
Ships and Vehicles	19
Consequences of Corrosion	19
Safety	20
Unscheduled Shutdowns	20
Environmental Damage	20
Loss of Product	21
Product Contamination	21
Excessive Maintenance Costs	21
Aesthetics	21
Methods for Design Optimization	22
Design Reviews	22
Use of Checklist	22
Recommendations	22
Value Engineering	23
Combination of Methods of Corrosion Control	23
