
Internal Corrosion for Pipelines — Advanced

Table of Contents

Chapter 1: Do I Have An Internal Corrosion Problem?

What is Internal Corrosion?	1
Basic Corrosion Cell	1
Forms of Corrosion	2
Uniform Corrosion	2
Localized Corrosion	3
Pitting	3
Crevice Corrosion	6
Mesa Corrosion	6
Weld Zone Corrosion	7
Environmentally Assisted Cracking (EAC)	8
Flow-Assisted Damage	9
Corrosion Mechanisms	9
Galvanic Corrosion	9
Concentration Cells	12
Potentially Corrosive Species	13
Carbon Dioxide (CO ₂)	13
Hydrogen Sulfide (H ₂ S)	16
Oxygen	17
Microbiologically Influenced Corrosion	19
Environmentally Assisted Cracking Mechanisms	21
Hydrogen Damage	21
Hydrogen Induced Cracking (HIC)	21
Hydrogen Embrittlement (HE)	23
Stress-Oriented Hydrogen Induced Cracking (SOHIC)	23
Sulfide Stress Cracking (SSC)	23
Stress Corrosion Cracking (SCC)	24
Liquid Metal Embrittlement (LME)	24
Flow-Assisted Damage Mechanisms	24
Erosion	25
Impingement	25
Erosion-Corrosion	25
Cavitation	26
What Type of Pipeline Is It?	27
Upstream Petroleum Production Pipelines	27
Crude Oil/ Multiphase High Vapor Pressure (HVP) Liquid	28
Water Cut	29
Natural Gas	29

Water Services (Sea, Produced, Fresh)	30
Fresh Water	31
Sea Water	31
Produced Water	32
Transmission Pipelines	32
Liquid Pipelines	32
Crude Oil (Low Vapor Pressure (LVP) Liquids)	33
Sulfur Content	34
Total Acid Number (TAN)	34
Basic (Bottom) Sediment and Water (BS&W)	35
Product Pipelines	35
Anhydrous Ammonia (NH ₃)	36
Natural Gas Pipelines	37
“Dry” Transmission Lines	37
Distribution Pipelines	38
Pipeline Facilities	39
Storage Systems	39
Other Service Pipelines	40
Slurry	40
Sewage	41
High Pressure Steam	41
Hydrogen	41
Super Critical CO ₂	41
Jet Fuel	42
Acid Gas Injection	42
Do I Have an IC problem?	43
Failures	43
Number of Failures	44
Year When Failure(s) Occurred	44
Location Along Pipeline	45
Orientation of Corrosion	45
Form of Corrosion	45
Corrosion Mechanism or Potentially Corrosive Species	45
Inspections and Assessments	46
Inspection/Assessment Method	47
Location of Inspection/Assessment	47
Date of Inspection/Assessment	47
Monitoring	48
Corrosion Rate	48
Detection of Localized Corrosion	49
Frequency	49
Date of Monitoring	49
Location	49

Water	50
Samples	50
Water Content and/or Dew Point	51
Removal of Water Following Hydrostatic Pressure Testing	52
Water Composition	53
pH	54
Scaling	54
Alkalinity	58
Chlorides	58
Corrosion Rate Modeling	59
Corrosion Inhibitors	59
Acids	59
Iron and Manganese	59
Microorganisms	60
Testing Results	60
Aerobic and Anaerobic Organisms	61
Types of Bacteria	61
Conditions Conducive to Bacteria Growth	63
Biocides	63
Solids Production	63
Types of Solids	64
Accumulation	64
Flow Modeling	65
Flow Rate	65
Flow Velocity	66
Flow Regimes	68
Wettability	71
Flow	71
Low or Stagnant Flow	72
High Flow	72
Entrainment	72
Operating Temperature and Pressure	72
Temperature	72
Pressure	73
System Design	74
Gas Transmission Pipeline Drips	74
Dead Legs/Ends	76
Pipeline Fittings	77
Compressor Stations and Associated Piping	78
Pig Launchers/Receivers	79
Expansion Loops	80

Chapter 2: If Yes, How Bad Is It?

Corrosion Rate Modeling	1
Anode/Cathode Area	2
Monitoring Techniques	3
Selection of Representative Monitoring Locations	4
Side Streams and Bypass Loops	5
Monitoring Points at Facilities	6
Direct Intrusive Techniques	6
Corrosion Coupons	8
Spool Piece	12
Electrical Resistance (ER) Probes	12
Linear Polarization Resistance (LPR) Probes	17
Electrochemical Noise (ECN)	20
Direct Non-Intrusive Techniques	23
Electrical Field Mapping (EFM)	23
Permanently Mounted UT Probes	25
Acoustic Solids Monitoring	26
Indirect Methods	26
Hydrogen Monitoring	27
Intrusive Hydrogen Probes	27
Non-intrusive Hydrogen Patch Probes	28
Gas Analysis	29
Water Analysis	30
Sample Collection	31
pH	32
Alkalinity	32
Anion Concentrations	32
Metal (Cation) Concentrations	33
Specific Gravity	33
Total Dissolved Solids (TDS)	33
Organic Acid	33
Inhibitor Residuals	34
Solid Analyses	34
Sample Collection	35
Qualitative Spot Tests	35
Energy Dispersive Spectroscopy (EDS)	36
X-ray Fluorescence (XRF)	38
X-ray Diffraction (XRD)	38
Microbiological Monitoring	39
Sample Collection	40
Planktonic Sampling	40
Sessile Sampling	40
Liquid Culture Media	41

Adenosine Triphosphate (ATP) Photometry	43
Hydrogenase Measurements	44
Fluorescence Microscopy	45
Adenosine Phosphosulfate (APS) Reductase	46
Monitoring Technique Selection	47
Real Time Monitoring Required	48
Environmentally Assisted Cracking (EAC) Expected	48
Intrusive Monitoring is Not Possible	48
Flow Assisted Damage is Expected	48
Complimentary Testing.	49
Inspection Methods	50
Selection of Representative Inspection Locations	50
Visual Inspection	50
Magnetic Flux Leakage	54
Ultrasonic Testing (UT)	55
Manual UT	55
Automated UT (AUT).	57
Guided Wave Ultrasonic Testing Technology (GWUT).	58
Eddy Current (EC)	59
Radiographic Testing (RT).	60
Inspection Method Selection	62
Wall Thickness Measurements	62
Screening Tool/Quick Inspection.	62
Detection of Internal Cracking.	62
Pipeline Replacement / Internal Surface Exposed	62
Assessments.	63
Direct Assessment Methodology	63
Dry Gas ICDA Methodology.	64
Pre-Assessment	64
Indirect Inspection.	69
Detailed Examination	71
Post Assessment	73
Wet Gas ICDA (WG-ICDA)	75
Pre-Assessment	75
Indirect Inspection.	76
Detailed Examination	77
Post Assessment	77
Liquid Petroleum ICDA.	77
Pre-Assessment	78
Indirect Inspection.	78
Detailed Examination	80
Post Assessment	80
Confirmatory Direct Assessment	81

Pressure Testing	81
In-line Inspection (ILI)	84
Assessment Method Selection	86
Determining If Mitigation Is Required	87

Chapter 3: How Do I Stop It?

Maintenance Pigging	1
Types of Maintenance Pigs	2
Mandrel Pigs	2
Foam Pigs	4
Solid-Cast Pigs	5
Sphere Pigs	6
Gel Pigs	7
Cleaning Frequency Schedule and Impacts	7
Performance Confirmation	9
Chemical Treatment	11
Application Methods	11
Continuous Injection	11
Batch Treatment	13
Concentration and Injection Rate	14
Factors Influence Chemical Treatment Performance	14
Temperature	15
Velocity	15
Solubility	15
Compatibility with System Fluids and Other Chemicals	15
Chemical Availability	16
Corrosion Inhibitors	16
Water Soluble Corrosion Inhibitors	18
Oil Soluble-Water Dispersible Corrosion Inhibitors	18
Oil Soluble Corrosion Inhibitors	18
Inorganic Corrosion Inhibitors	19
Biocides	19
Resistance to Biocides	21
Alternatives to Biocides	22
Scavengers	22
Oxygen Scavengers	23
Hydrogen Sulfide (H ₂ S) Scavengers	23
Chemical Cleaning	24
Design and Operation	25
Water Removal	25
Removal of Potentially Corrosive Gases	25
Modifying Flow Characteristics	26

Physical Design Changes	26
Selecting and Implementing Appropriate Methods	28
Effectiveness of Mitigation Method	29

Chapter 4: How Do I Design To Prevent Corrosion?

Define the Service Environment	1
What is the Expected Product Quality	1
What are the Expected Operating Conditions?	2
Corrosion Form/Rate Prediction	2
Past Experiences	2
Non-Corrosive Systems	3
Effectively Mitigated Systems	3
Monitoring/Inspection Results	3
Internal Corrosion Failures	3
Industry Guidance	4
Corrosion Modeling	4
Design Features	5
Removal of Water	5
Separation	5
Dehydration/Dewatering	8
Gas Dehydration	9
Joule-Thompson Expansion	9
Solid Desiccant	10
Liquid Desiccant	10
Liquid Dewatering	11
Electrostatic Treatment	12
Heat Treatment	12
Chemical Treatment	12
Time/Gravity	13
Removal of Corrosive Gases	13
Amine Scrubbers	14
Membrane Units	14
H ₂ S Scavenger Units	15
Catalytic Combustion	15
Drips	15
Geometry – Physical Design Changes	17
Inspectability/Accessibility	17
Piggable Lines	17
Monitoring Access Points	18
Materials Selection	18
Is the Material Suited to the Environment?	20
Can Carbon Steel Be Used?	20

Protective Coatings	20
Cement Mortar Lining (CML)	22
Elastomeric Liners	22
Cladding	23
Selecting and Implementing Appropriate Mitigation Methods	24
Selection of Alternative Materials	25
Corrosion Mitigation	26
Pitting	26
Crevice Corrosion	26
Galvanic Corrosion	27
Weld Zone Corrosion	27
Microbiologically Influenced Corrosion (MIC)	27
Stress Corrosion Cracking (SCC)	28
Hydrogen Induced Cracking (HIC)	28
Stress Oriented Hydrogen Induced Cracking (SOHIC)	29
Sulfide Stress Cracking (SSC)	30
Erosion-Corrosion	30
Cavitation	31

Chapter 5: How Do I Optimize An Internal Corrosion Program?

What is Risk Management?	1
Risk Identification	2
Risk Evaluation	4
Risk Matrices	5
Bow-Tie Technique	5
Risk Based Decision Making	6
Risk Mitigation	6
Risk Monitoring	8
Economics	8
Accounting Methods	9
Rate of Return (ROR)	9
Net Present Value (NPV)	10
Profitability Index (PI)	12
Profitability Decisions (NPV, ROR, PI)	13
Life-cycle costing	14
Economic Maintenance Optimization	15
Internal Corrosion Management Program	16
Internal Corrosion Management Plan	16
Roles and Responsibilities	16
Monitoring	17
Mitigation	17
Data Management and Integration	18

Continuous Improvement Options	19
Management of Changes	20
Change of Product Mix	20
Change of Flow or Flow Direction	20
Pressure and Temperature Changes	21
